

Browser Compatibility

- 1) Optimize web pages, as deemed appropriate, to work with select browsers. The International Technology Committee recommends compatibility with the following as a minimum:
 - a) Microsoft Internet Explorer
 - b) Mozilla Firefox
 - c) Google Chrome
 - d) Apple Safari
- 2) Avoid designs that use frames
- 3) Do not frame another site's content
- 4) Avoid using valuable screen space on scroll bars or other elements that don't add value to the content. Consider that typical navigation bars automatically loaded by commercial browsers may decrease available screen space for the user
